

INTERCONNECTING DEVICE, COMMUNICATION CONTROL METHOD, COMMUNICATION CONTROL PROGRAM, AND COMMUNICATION SYSTEM

Abstract of Disclosure

An interconnecting device for relaying a voice call and a fax communication of a communication terminal between an analog line and a digital line, the digital line having a bandwidth being controlled by a control apparatus, the interconnecting device comprising: a start signal receiving unit for receiving a fax communication start signal from the communication terminal through the analog line, the fax communication start signal indicating a start of the fax communication; and request signal sending unit for requesting of the control apparatus that the bandwidth of the digital line available to the interconnecting device be expanded from in the voice call when the start signal receiving unit receives the fax communication start signal.
